Upgrade Your Old 486

To A Blazing Fast

6x86 or K6-200 MMX

We can upgrade most 486 systems with a new 6x86 (Pentium-class) or K6 motherboard and processor for a fraction of the cost of a new system. Upgrade to a 6x86 P166+ motherboard and processor for only **$389** (includes pickup of your system, the new motherboard, processor, cooling fan, and return delivery of your system). Upgrade to a 6x86 P200+ for only **$489.** Upgrade to a K6-200 for only **$729.** Add in 16 MB of RAM for only **$141.** If you would like complete information on this upgrade special, please call and request document **#706123.** Y*ou shouldn't have to wait for your computer.*

Software Picks Of The Month: We have many discounted software packages available for up to 25% off retail. Call and request document **#706126** for a complete listing.

Your Software/Data On CD-ROM: We can take your applications or data and put them on a CD that will work in any standard CD-ROM drive. Perfect for archival or storage needs where you need quick and easy access to your data. Request document **#706127.**

Time To Clean Your System: Just like

your car, your computer needs regular preventative maintenance. Our standard *PCDoctor* service is only $49 carry-in or $59 in your office. Request document **#706128.**

MONITOR UPGRADE SPECIAL: Trade in your old 14" or 15" VGA monitor and purchase a new 15" Color SVGA monitor for only $259. Request document **#706129.**

Is your software in the Dark Ages?

Do you have newer computer systems in your office, but you're still running ancient DOS-based software? We can take your old DOS database applications and re-write them with a nice new efficient Windows-based user interface. You will benefit from the increased functionality and user friendliness of a Windows application. If you would like more information, please call and request document **#706124.** Also, just a side note, but we have seen many of our clients using custom vertical-application software for their businesses that cost them many *thousands* of dollars. In addition, if there are problems with the software down the line, they charge *hundreds* of dollars for technical support. We have built many, *many* databases for our satisfied clients for a fraction of the cost, and we always provide our customers with *free* technical support for any problems that may arise in the future. Amicron is the *logical* choice for business software needs.

Network Your Office

We have been doing a lot of small- to mid-sized office networking as of late. From what people are telling us the reason why most small businesses are afraid to network is because they're anticipating spending thousands of dollars. *It doesn't have to be expensive to network your office.* Here is the typical scenario we run into: three 486 or Pentium-class computers in the same general area (within 50' of each other). If you're already running Windows For Workgroups 3.11 or Windows 95, there is *no* additional software cost. All you need is 3 network cards (cost $40 each), cabling (less than $20) and about 5 hours of service to install the cards, configure the network drivers, and set up your network shared resources (drives, printers, etc.) Total cost: around $500. A minimal investment when you consider the advantages that a networked office can bring: you can share hard drive directories, files, CD-ROM drives, Email; you can all run shared applications such as a customer/accounting database that you will all have access to at the same time, and more. If you are interested in how we can help network your office, request document **#706125.**
