Still Accepting Resumes. We are still accepting resumes for a part- or full-time computer instructor for our *Executive Training Center.* Interested applicants please mail your resume to PO Box 1453, Buffalo NY 14225 or fax to 716-833-6724. No phone calls.

Q: I know how to get something to start automatically in Windows 3.1 by putting it's icon in the StartUp folder. How do I do it in Windows 95? > *Darren, Buffalo NY*

A: It's basically the same thing, Darren. All you do is put it in your StartUp folder. Just go to the Start Button, and *right-click* on it. Click on Open. Now, go to the Programs folder. You'll see the StartUp folder in there. Just drag-n-drop you application on it and you're all set. Likewise, if you want to put a program on your Start button - but don't want it necessarily starting automatically when you load Windows, just drag-n-drop it right on the Start button itself. >*Jason*

Is Your **Software** In The **Dark Ages?**

Move your office from it's ancient DOS-based antique software to a new, efficient, user-friendly Windows-based system for *less* than you'd expect. We can custom-build software around *your* specifications. If you would like more information, please call and request document **#706211.** We also specialize in handling your year-2000 needs.

Upgrade Your PC To A *Fast* 6x86

Are you tired of waiting for your computer? Allow us to recommend a motherboard upgrade. It's like putting a whole new engine in your car - but at a fraction of the cost. We can take your old 486 and upgrade it to a fast new 6x86 (Pentium-class) system for as little as **$355**. This price includes a new motherboard, processor, and service. If you would like complete details on this offer, please call and request document **#706212**. There is no obligation.

Q: I recently added a second hard drive and a new ZIP drive to my system, since then, I've had nothing but problems with my hard drives crashing, the clock losing the date, and other related oddities. I've brought the drives back to [the vendor] and they said they're fine. What could be the problem? >*Mark, Cheektowaga NY*

A: It's probably power. When you upgraded your system, did you upgrade your power supply as well? Most 486 and Pentium systems come with either a 200 or 230 Watt power supply. However, if you're adding lots of drives, you need more juice. I would recommend upgrading your power supply to at *least* 250 Watts. This would explain your hard drive problems and loss of clock time. >*Don*

Network Your Office.

Share files, printers, Email, and all of your company data such as customer records, product info and *more*. All it takes is a few inexpensive network cards, some cable, and Windows 3.11 or 95. Request document **#706213** for details.

COMPUTER TRAINING

If you would like to learn more about the software you use - *Microsoft Word, Excel, PowerPoint, Access, WordPerfect, Windows 3.1/95/NT*, the Internet, and more - then call and request document **#706214** for a complete schedule of classes, pricing, and details. We have classes available for everyone - individuals and corporate customers as well. We also offer on-site training. Call today for more information - or a detailed course outline. After all, your computer is useless if you don't know how to use it! **NEW:** we are now enrolling for our 6-week *Developer* series for Microsoft Access. If you are interested in building professional database applications in Microsoft Access, this is the course for you. Call and request document **#706215** for complete details.

Now is the time for **PCDoctor Preventative Maintenance** service to make sure your computer is running properly. Only $49 carry-in or $59 on-site. Request document **#706216** for details.

Call and request document **#706217** for our **Software Picks** of the Month. We are always offering discounted prices on selected new software titles such as *Microsoft Office 97* and *System Commander.*

Q: How can I turn page-numbering *off* in Microsoft Word 6.0?

A: That's not an easy one for most people. There is a nice quick and easy way to turn page-numbering on, but turning it back off is tricky. What Microsoft does is actually place the page number in the header or footer (whichever you choose) of the page. So, to get rid of it, go to View, Header and Footer, and then double-click on the page number. Hit DELete on your keyboard, and bye-bye page number. >*Rick*
